

# Map and Set – Lab

Submit your solutions here: <https://judge.softuni.org/Contests/3025/Maps-and-Sets-Lab>

## 1. Count Same Values in Array

Write a program that counts in a given array of double values the number of occurrences of each value.

### Examples

Input	Output
-2.5 4 3 -2.5 -5.5 4 3 3 -2.5 3	-2.5 - 3 times 4 - 2 times 3 - 4 times -5.5 - 1 times
2 4 4 5 5 2 3 3 4 4 3 3 4 3 5 3 2 5 4 3	2 - 3 times 4 - 6 times 5 - 4 times 3 - 7 times

## 2. Average Student Grades

Write a program, which reads a **name** of a student and their **grades** and **adds** them to the **student record**, then **prints** the students' **names** with their **grades** and their **average grade**, **sorted by students' names in ascending order**.

### Examples

Input	Output
7 John 5.20 Maria 5.50 John 3.20 Maria 2.50 Sam 2.00 Maria 3.46 Sam 3.00	John -> 5.20 3.20 (avg: 4.20) Maria -> 5.50 2.50 3.46 (avg: 3.82) Sam -> 2.00 3.00 (avg: 2.50)
4 Vlady 4.50 Peter 3.00 Vlady 5.00 Peter 3.66	Peter -> 3.00 3.66 (avg: 3.33) Vlady -> 4.50 5.00 (avg: 4.75)
5 George 6.00 George 5.50 George 6.00 John 4.40 Peter 3.30	George -> 6.00 5.50 6.00 (avg: 5.83) John -> 4.40 (avg: 4.40) Peter -> 3.30 (avg: 3.30)

### 3. Cities by Continent and Country

Write a program that reads **continents**, **countries**, and their **cities**, puts them in a **nested Map** and **prints** them, **sorted by continents' name by ascending order, then by countries' names in ascending order and finally order by cities' name**.

#### Examples

Input	Output
9 Europe Bulgaria Sofia Asia China Beijing Asia Japan Tokyo Europe Poland Warsaw Europe Germany Berlin Europe Poland Poznan Europe Bulgaria Plovdiv Africa Nigeria Abuja Asia China Shanghai	Africa: Nigeria -> Abuja Asia: China -> Beijing, Shanghai Japan -> Tokyo Europe: Bulgaria -> Plovdiv, Sofia Germany -> Berlin Poland -> Poznan, Warsaw
3 Europe Germany Berlin Europe Bulgaria Varna Africa Egypt Cairo	Africa: Egypt -> Cairo Europe: Bulgaria -> Varna Germany -> Berlin
8 Africa Somalia Mogadishu Asia India Mumbai Asia India Delhi Europe France Paris Asia India Nagpur Europe Germany Hamburg Europe Poland Gdansk Europe Germany Danzig	Africa: Somalia -> Mogadishu Asia: India -> Delhi, Mumbai, Nagpur Europe: France -> Paris Germany -> Danzig, Hamburg Poland -> Gdansk

### 4. Record Unique Names

Write a program, which will take a list of **names** and print **only** the **unique** names in the list.

#### Examples

Input	Output	Input	Output	Input	Output
8 Ivan Pesho Ivan Stamat Pesho Alice Peter Pesho	Ivan Pesho Stamat Alice Peter	7 Lyle Bruce Alice Easton Shawn Alice Shawn	Lyle Bruce Alice Easton Shawn	6 Roki Roki Roki Roki Roki Roki	Roki

### 5. Parking Lot

Write a program that:

- Records a **car number** for every car that enters the **parking lot**.
- Removes a **car number** when the car leaves the **parking lot**.

The input will be a string in the format: "**direction, carNumber**". You will be receiving commands until the "**END**" command is given.

Print the car numbers of the cars, **sorted by car numbers in ascending order**, which are still in the parking lot:

## Examples

Input	Output
IN, CA2844AA IN, CA1234TA OUT, CA2844AA IN, CA9999TT IN, CA2866HI OUT, CA1234TA IN, CA2844AA OUT, CA2866HI IN, CA9876HH IN, CA2822UU END	CA2822UU CA2844AA CA9876HH CA9999TT
IN, CA2844AA IN, CA1234TA OUT, CA2844AA OUT, CA1234TA END	Parking Lot is Empty

## 6. Unique Usernames

Write a program that reads from the console a sequence of **N usernames** and keeps a collection only of the **unique** ones. On the **first** line, you will be given an integer **N**. On the next **N** lines, you will receive **one** username **per line**. Print the collection on the console, in ascending order:

## Examples

Input	Output
6 Ivan Ivan Ivan Pesho Ivan NiceGuy1234	Ivan NiceGuy1234 Pesho

## 7. Sets of Elements

Write a program that prints a **set of elements**. On the first line, you will receive two numbers – **n** and **m**, which represent the lengths of two separate sets. On the next **n + m** lines you will receive **n** numbers, which are the numbers in the **first** set, and **m** numbers, which are in the **second** set. Find all the **unique elements** that appear in **both of them** and **print** them in the ascending order.

For example:

Set with length  $n = 4$ : {1, 3, 5, 7}

Set with length  $m = 3$ : {3, 4, 5}

Set that contains all the **elements** that repeat in **both sets**  $\rightarrow$  {3, 5}

## Examples

Input	Output
4 3 1 3 5 7 3 4 5	3 5
2 2 1 3 1 5	1

## 8. Even Times

Write a program that **prints** a **number** from a collection, which appears an **even number** of **times** in it. On the first line, you will be given **n** – the **count** of **integers** you will receive. On the next **n** lines, you will be receiving **the numbers**. It is **guaranteed** that **only one** of them **appears** an **even number** of times. Your task is to **find** that **number** and **print** it in the end.

## Examples

Input	Output
3 2 -1 2	2
5 1 2 3 1 5	1
